

# Contents

Preface .....	9
<b>1. Challenges in Systems Epidemiology in Cancer</b> .....	<b>11</b>
<i>Eiliv Lund</i>	
About the book .....	11
High dimensional, time-dependent dynamic curves—the processual challenge .....	13
Novel designs—integrated systems epidemiology approach .....	14
Statistical challenges of sparsely sampled curves .....	15
From mice to women—seven levels of analogical fallacies .....	16
Exploring the trajectories of gene expression .....	17
Two theories of immune dysfunction and resistance during carcinogenesis	18
When systems epidemiology merges with systems biology .....	19
The future .....	20
Epilogue: Explorative research as sailing in uncharted waters .....	20
References .....	20
<b>2. The Beauty of Complex Designs</b> .....	<b>23</b>
<i>Jo Inge Arnes and Lars Ailo Bongo</i>	
Introduction .....	23
Complex designs .....	25
Norwegian Women and Cancer Study .....	26
Designing systems epidemiological studies .....	28
Two alternative types of study design .....	35
Towards realizing the potential .....	37
Computer systems architecture .....	37
Conclusion .....	43
Acknowledgements .....	43
References .....	44
<b>3. Reproducible Data Management and Analysis Using R</b> .....	<b>48</b>
<i>Bjørn Fjukstad, Nikita Shvetsov, Therese H. Nøst, Hege Bøvelstad, Till Halbach, Einar Holsbø, Knut Hansen and Lars Ailo Bongo</i>	
Introduction .....	48
Data analysis lessons learned in the Norwegian Women and Cancer Study	50
Enabling reproducible data analyses .....	52
Conclusions .....	60
Acknowledgements .....	60
References .....	60

<b>4. Practical and Ethical Issues in Establishing a Collection of Normal Breast Tissue Biopsies—Part of the NOWAC Post-Genome Cohort . . . . .</b>	<b>63</b>
<i>Sanda Krum-Hansen and Karina Standahl Olsen</i>	
Background . . . . .	63
Methods . . . . .	66
Results . . . . .	68
Discussion . . . . .	70
Conclusion . . . . .	75
References . . . . .	75
<b>5. Woes of The Practicing Omics Researcher . . . . .</b>	<b>77</b>
<i>Einar Holsbø and Kajsa Møllersen</i>	
To be trapped between tools and materials . . . . .	77
Scientific raw materials: dataset sizes . . . . .	79
The limits of our tools . . . . .	80
Reality check . . . . .	81
Exploratory omics analyses . . . . .	86
Discussion . . . . .	89
Technical details . . . . .	91
Magnitude errors . . . . .	92
References . . . . .	93
<b>6. Statistics of Sparsely Sampled Curves . . . . .</b>	<b>95</b>
<i>Marit Holden and Lars Holden</i>	
Introduction . . . . .	95
Methods for analyzing complex curves . . . . .	97
Examples of use of the methods . . . . .	102
References . . . . .	108
<b>7. Seven Levels of Analogical Fallacies—From Mice to Women . . . . .</b>	<b>110</b>
<i>or from reductionist experiments in mice to functional transcriptomics in humans</i>	
<i>Eiliv Lund</i>	
Seven levels of analogical fallacies . . . . .	111
Discussion . . . . .	116
Conclusion . . . . .	118
References . . . . .	118

<b>8. A New Statistical Method for Curve Group Analysis of Longitudinal Gene Expression Data Illustrated for Breast Cancer in The NOWAC Postgenome Cohort as a Proof of Principle</b> . . . . .	120
<i>Eiliv Lund, Lars Holden, Hege Bøvelstad, Sandra Plancade, Nicolle Mode, Clara-Cecilie Günther, Gregory Nuel, Jean-Christophe Thalabard and Marit Holden</i>	
Background . . . . .	121
Methods . . . . .	122
Results . . . . .	131
Discussion . . . . .	136
Conclusions . . . . .	138
Acknowledgements . . . . .	138
Authors' contributions . . . . .	139
References . . . . .	139
<b>9. Signals of Death—Post-Diagnostic Single Gene Expression Trajectories in Breast Cancer—A Proof of Concept</b> . . . . .	141
<i>Eiliv Lund, Marit Holden, Jean-Christophe Thalabard, Lill-Tove Busund, Igor Snapkov and Lars Holden</i>	
Introduction . . . . .	142
Methods . . . . .	143
Material . . . . .	143
Statistical methods . . . . .	145
Results . . . . .	149
Discussion . . . . .	156
Conclusion . . . . .	159
Disclaimer . . . . .	160
Acknowledgements . . . . .	160
Authors' contributions . . . . .	160
References . . . . .	160
<b>10. Hypotheses of Carcinogenesis—The Atavistic Theory</b> . . . . .	163
<i>Lill-Tove Busund</i>	
Gene expression information from the NOWAC study . . . . .	166
References . . . . .	168
<b>11. The Immuno-Carcinogen Theory of Cancer—The Lifelong Dynamic Interface Between the Immune System and the Carcinogen-Driven Carcinogenesis</b> . . . . .	170
<i>Eiliv Lund</i>	
Systems epidemiology studies of gene expression from peripheral immune cells in blood . . . . .	171
Historical theories . . . . .	171
The immune system and cancer—a long history . . . . .	172

The need for collaboration across scientific disciplines .....	173
Challenges of the dynamic interference theory .....	174
Epilogue .....	175
References .....	175
<b>Supplement: Workshop to facilitate Cancer Systems Epidemiology</b>	
<b>Research (NIH) .....</b>	<b>178</b>
Overview .....	178
Purpose .....	178
Systems Epidemiology Key References .....	179
Dissemination & Implementation Panel .....	180
<b>First Author Nota .....</b>	<b>181</b>
<b>Affiliations .....</b>	<b>184</b>
