

# CONTENTS

Preface .....	9
Chapter 1	
Introduction .....	13
PART I	
THE WORLD OF RISK – SOME ILLUSTRATIVE ISSUES AND EXAMPLES .....	19
Chapter 2	
Is risk something good or attractive? .....	21
Chapter 3	
Space exploration .....	27
Chapter 4	
Is the terrorism threat fictitious? .....	31
Chapter 5	
Climate change risk .....	35

Chapter 6	
The origin of the coronavirus .....	38
Chapter 7	
Vaccines .....	42
Chapter 8	
The Fedje submarine .....	46
Chapter 9	
Black swans .....	51
Chapter 10	
Perfect storms .....	56
PART II	
RISK SCIENCE AND SCIENCE IN GENERAL .....	59
Chapter 11	
What is risk? .....	61
Chapter 12	
In short, what is risk science about? .....	65
Chapter 13	
What is the scientific method? .....	68
Chapter 14	
<i>Idol</i> and science .....	74

Chapter 15	
What does the precautionary principle mean? . . . . .	77
Chapter 16	
Is the handling of COVID-19 about science or politics? . . . . .	81
Chapter 17	
The importance of robustness and resilience . . . . .	85
Chapter 18	
What is safe enough? . . . . .	89
Chapter 19	
Are people’s risk perceptions irrational? . . . . .	94
Chapter 20	
The search for a formula for making good decisions under risk and uncertainty . . . . .	99
Chapter 21	
Do all events have a cause? . . . . .	103
PART III	
RISK ASSESSMENTS AND PROBABILITIES . . . . .	107
Chapter 22	
What is the chance of Yatzy? . . . . .	109

Chapter 23	
Jacob Bernoulli and the specification of probabilities . . . . .	113
Chapter 24	
More about probabilities, what they mean, and why they are important . . . . .	116
Chapter 25	
The Athenians conducted risk assessments, but they lacked the probabilities . . . . .	121
Chapter 26	
The use of probabilities in legal matters . . . . .	125
Chapter 27	
Good risk characterizations: Traditional risk matrices must be rejected . . . . .	128
Chapter 28	
The need to build the risk assessments on a solid scientific basis . . . . .	132
Chapter 29	
Final reflections: Risk science should be taught in schools . . . . .	134
